

Channel: Vulnerability assessment framework

October 2012

This document provides a description of the vulnerability assessment framework used by Channel projects to guide decisions about whether an individual needs support to address their vulnerability to radicalisation and the kind of support that they need. It should be read alongside the Channel guidance (<http://www.homeoffice.gov.uk/publications/counter-terrorism/prevent/channel-guidance>).

Channel is a key element of the *Prevent* strategy (<http://www.homeoffice.gov.uk/publications/counter-terrorism/prevent/prevent-strategy/>). It is a multi-agency approach to protect people at risk from radicalisation. Channel uses existing collaboration between local authorities, statutory partners (such as the education and health sectors, social services, children's and youth services and offender management services), the police and the local community to:

- identify individuals at risk of being drawn into terrorism;
- assess the nature and extent of that risk; and
- develop the most appropriate support plan for the individuals concerned.

Channel is about safeguarding children and adults from being drawn into committing terrorist-related activity. It is about early intervention to protect and divert people away from the risk they face before illegality occurs.

It should not be assumed that the characteristics set out below necessarily indicate that a person is either committed to terrorism or may become a terrorist. The assessment framework involves three dimensions: engagement, intent and capability, which are considered separately.

I. *Engagement with a group, cause or ideology*

Engagement factors are sometimes referred to as “psychological hooks”. They include needs, susceptibilities, motivations and contextual influences and together map the individual pathway into terrorism. They can include:

- Feelings of grievance and injustice
- Feeling under threat
- A need for identity, meaning and belonging
- A desire for status
- A desire for excitement and adventure
- A need to dominate and control others
- Susceptibility to indoctrination
- A desire for political or moral change
- Opportunistic involvement
- Family or friends involvement in extremism
- Being at a transitional time of life
- Being influenced or controlled by a group
- Relevant mental health issues

2. *Intent to cause harm*

Not all those who become engaged by a group, cause or ideology go on to develop an intention to cause harm, so this dimension is considered separately. Intent factors describe the mindset that is associated with a readiness to use violence and address what the individual would do and to what end. They can include:

- Over-identification with a group or ideology
- 'Them and Us' thinking
- Dehumanisation of the enemy
- Attitudes that justify offending
- Harmful means to an end
- Harmful objectives

3. *Capability to cause harm*

Not all those who have a wish to cause harm on behalf of a group, cause or ideology are capable of doing so, and plots to cause widespread damage take a high level of personal capability, resources and networking to be successful. What the individual is capable of is therefore a key consideration when assessing risk of harm to the public. Factors can include:

- Individual knowledge, skills and competencies
- Access to networks, funding or equipment
